

BioStack Protocol Quick Reference

Educational/provider-review draft. One new variable at a time. Totals are Weeks 1-15 planning math only.

Weeks	NAD+	MOTS-c	GHK-Cu	BPC/KPV	Retatrutide	Cognitive / Epitalon
1-2	25 mg 2x/wk	-	-	-	-	-
3	50 mg 2-3x/wk	Start	-	-	-	-
4	50 mg 2-3x/wk	Continue	Start standalone	-	-	-
5-6	75-100 mg 2-3x/wk	Continue	Continue	Start after GHK-Cu quiet window	-	-
7	100 mg 2-3x/wk	Continue	Continue	Continue	-	-
8-10	Maintenance	Continue	Continue	Continue/cycle	Start only if stable + provider/labs	-
11-12	Maintenance	Continue/cycle	Continue	Continue/cycle	Stable/titrate	Semax/Selank only if stable
13-15+	Maintenance	Optional cycle	Continue	Continue/cycle	Stable	Epitalon short cycle; Dihexa later only if justified

Substance	Weeks 1-15 total mg estimate	Bac water planning examples
NAD+	2,400-3,700 mg	50 mg/mL: 48-74 mL; 100 mg/mL: 24-37 mL
MOTS-c	130 mg baseline; up to ~390 mg high path	10 mg/mL: 13-39 mL
GHK-Cu	84-168 mg	10 mg/mL: 8.4-16.8 mL; 20 mg/mL: 4.2-8.4 mL
BPC-157	19.25-38.5 mg	5 mg/mL: 3.85-7.7 mL; 10 mg/mL: 1.93-3.85 mL
KPV	15.4-38.5 mg	5 mg/mL: 3.08-7.7 mL; 10 mg/mL: 1.54-3.85 mL
Retatrutide	15-26 mg example 8-week ramp	10 mg/mL: 1.5-2.6 mL; 20 mg/mL: 0.75-1.3 mL
Semax	7-21 mg	5 mg/mL: 1.4-4.2 mL; 10 mg/mL: 0.7-2.1 mL
Selank	7-17.5 mg	5 mg/mL: 1.4-3.5 mL; 10 mg/mL: 0.7-1.75 mL
Epitalon	10-20 mg per short cycle	5 mg/mL: 2-4 mL; 10 mg/mL: 1-2 mL
Dihexa	TBD	Excluded until provider-defined

Support Stack, Labs, and Review Triggers

Support stack	Baseline labs/imaging	Repeat every 5-6 weeks during retatrutide	Provider-review triggers
First meal: 30-40 g protein + ~40 g clean carbs L-carnitine 3 g Phosphatidylcholine 3 g Vitamin E 400 IU Selenium 200 mcg TUDCA 500 mg with 2 biggest meals NAC 1,000 mg Methyl B complex/B12/folate Magnesium glycinate 500 mg night Zinc 30 mg	Fasting insulin/glucose, HOMA-IR ALT, AST, ALP, GGT Total/direct bilirubin Albumin, total protein TG, HDL, LDL, lipid panel Ferritin, CMP, HbA1c Vitamin D, B12, folate, selenium Liver ultrasound with elastography	Fasting insulin GGT ALT/AST Triglycerides HDL Triglyceride/HDL ratio	GGT rising/stable high: review retatrutide pace and hepatic/biliary stress TG/HDL worsening: review hepatic lipid export, protein, carb quality, L-carnitine, and dose GI symptoms, dehydration, abdominal pain, HR rise, sleep/mood issues: hold escalation and review
